

More Results

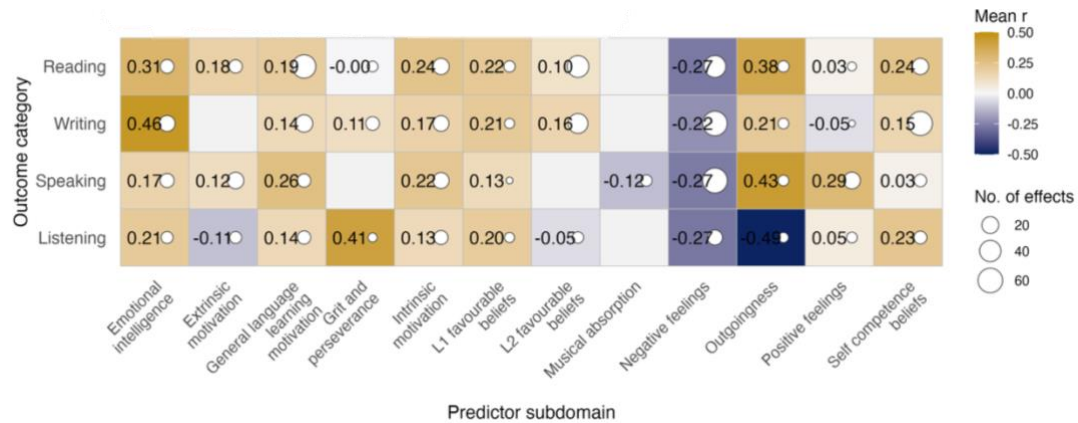

This document provides a visual overview of associations between predictor domains and additional-language outcomes. Heatmaps are organised by predictor domain and distinguish between broader language skills (e.g., reading, listening, speaking, and writing) and specific linguistic features (e.g., lexical semantics, morphosyntax, phonology, orthography, and syntax). Cell colour represents the direction and magnitude of the descriptive mean correlation (r), while bubble size indicates the number of contributing effects. Blank cells indicate that no eligible effects were available. These figures show the distribution and coverage of evidence.

<i>Affective Predictors</i>	2

<i>Cross-Linguistic Influence Predictors</i>	4
<i>Language Exposure Predictors</i>	5
<i>Sociocontextual Predictors</i>	6

Affective Predictors

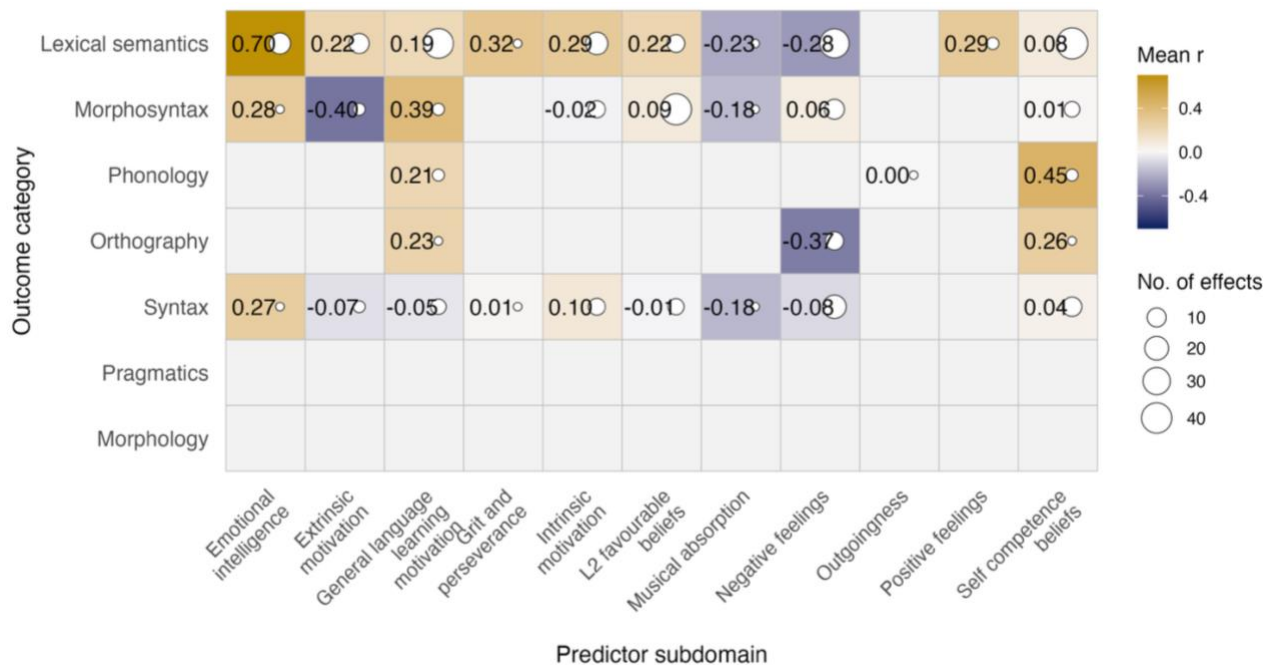

Patterns of Associations Across Affective Predictors and Language Skills

Descriptive mean r ; bubble size indicates the number of effects.

Patterns of Associations Across Affective Predictors and Linguistic Features

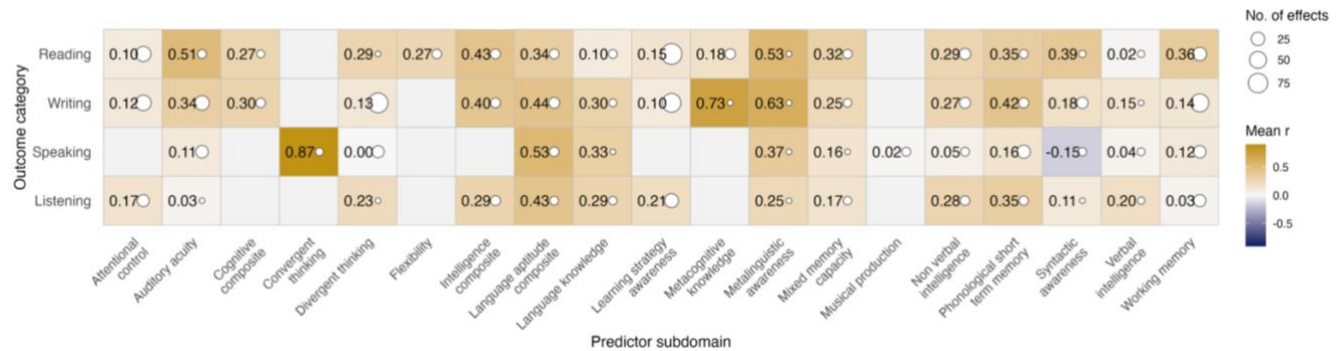

Descriptive mean r ; bubble size indicates the number of effects.

Cognitive Predictors

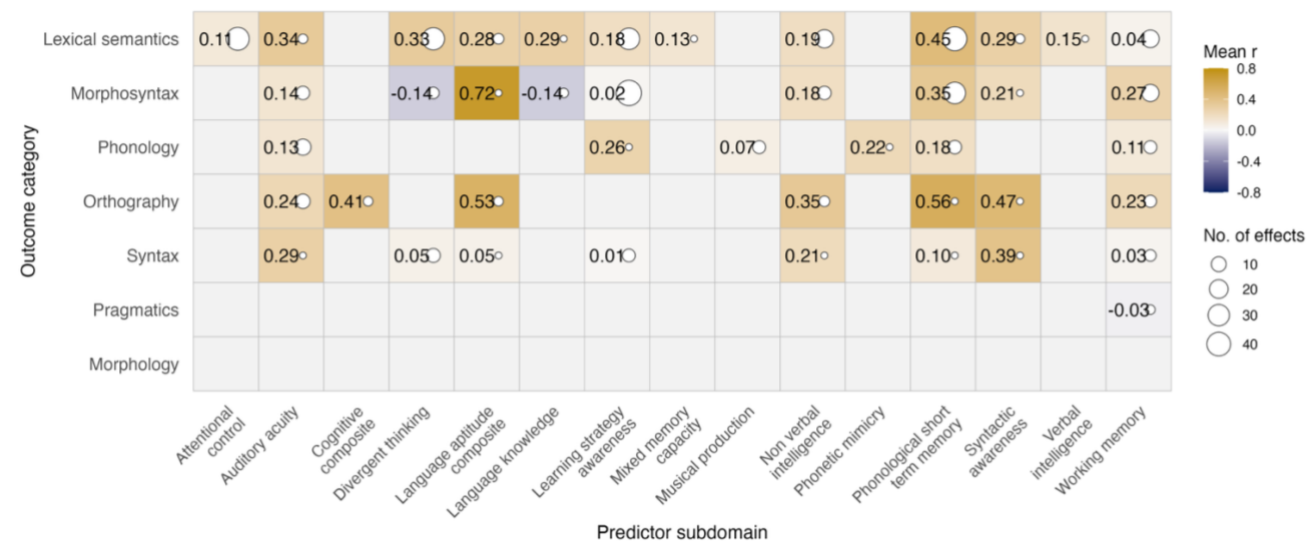

Patterns of Associations Across Cognitive Predictors and Language Skills

Descriptive mean r ; bubble size indicates the number of effects.

Patterns of Associations Across Cognitive Predictors and Linguistic Features

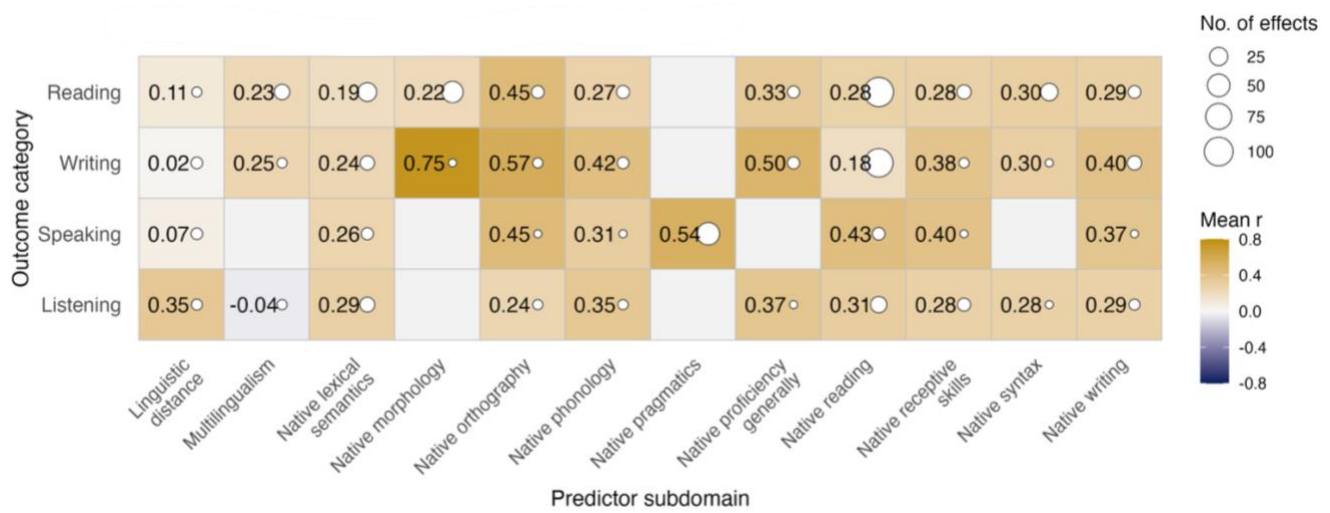

Descriptive mean r ; bubble size indicates the number of effects.

Cross-Linguistic Influence Predictors

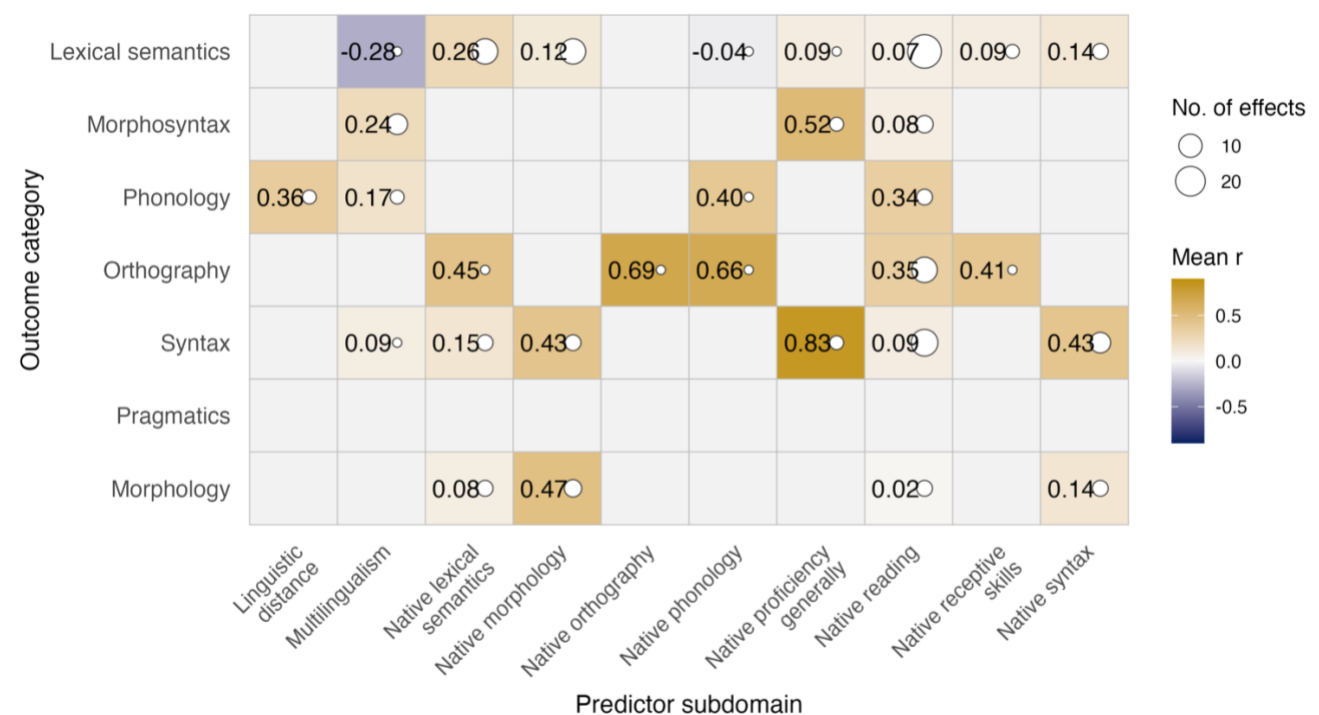

Patterns of Associations Across Cross-Linguistic Influence Predictors and Language Skills

Descriptive mean r ; bubble size indicates the number of effects.

Patterns of Associations Across Cross-Linguistic Influence Predictors and Linguistic Features

Descriptive mean r ; bubble size indicates the number of effects.

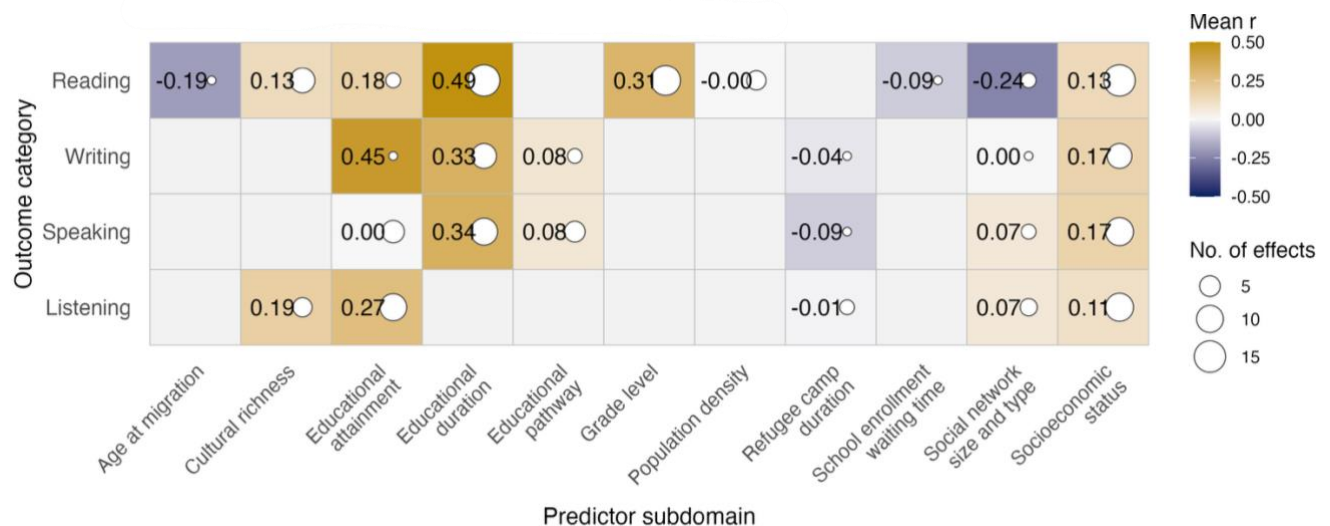

Sociocontextual Predictors

Patterns of Associations Across Sociocontextual Predictors and Language Skills

Descriptive mean r ; bubble size indicates the number of effects.

Patterns of Associations Across Sociocontextual Predictors and Linguistic Features

Descriptive mean r ; bubble size indicates the number of effects.
